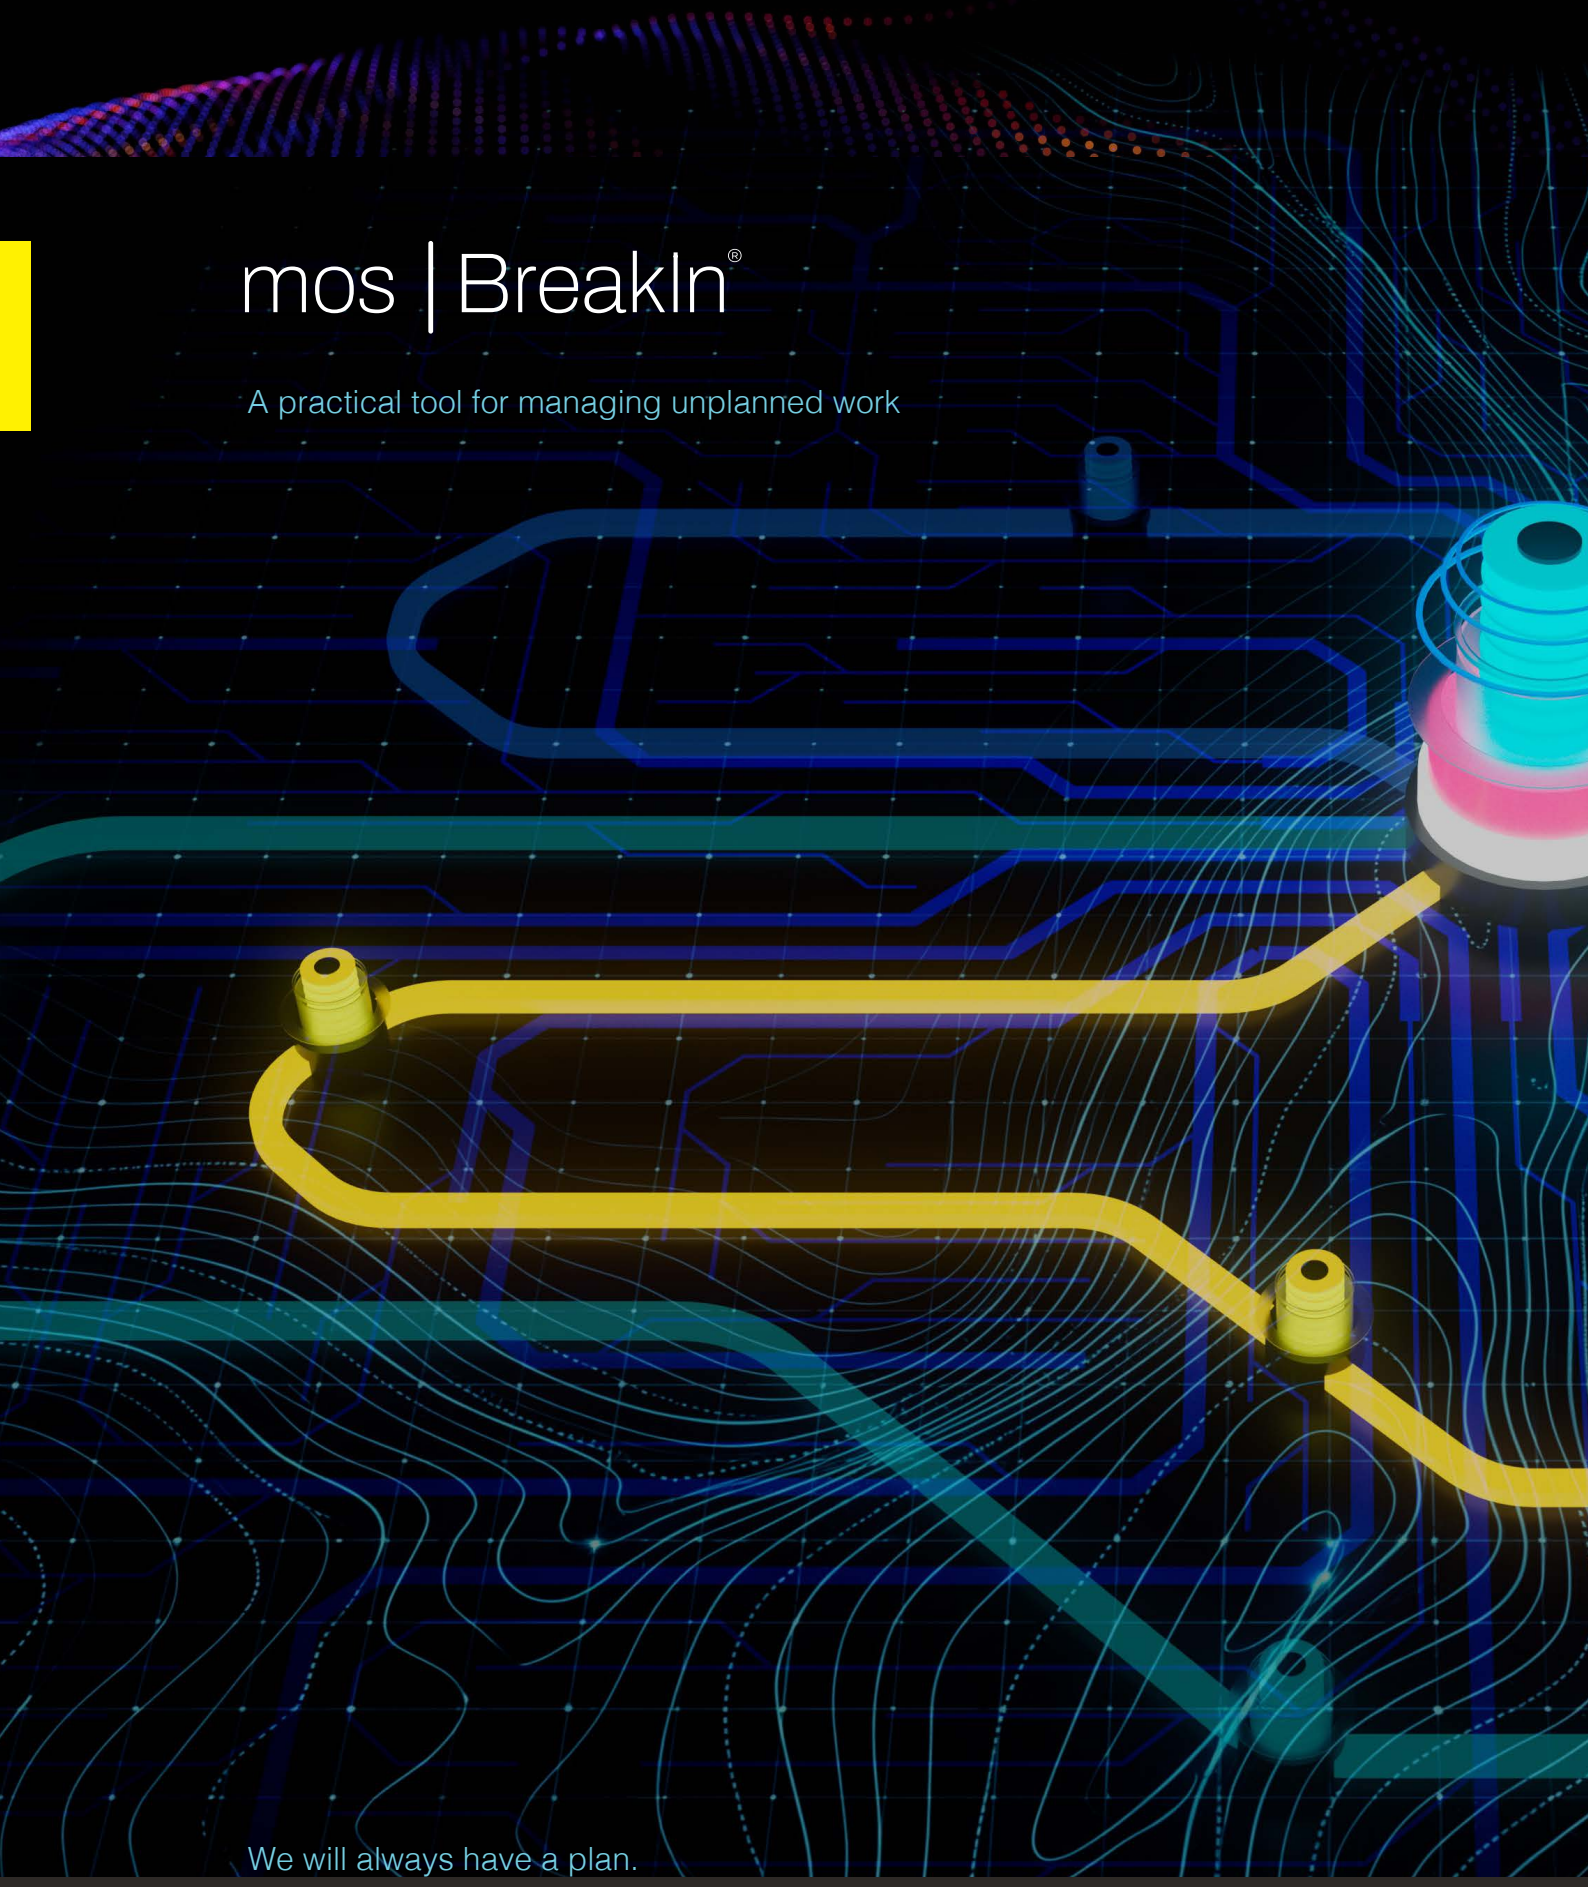
mos | BreakIn®

A practical tool for managing unplanned work



We will always have a plan.

Product status: In production

mos | BreakIn®

BreakIn is designed for Supervisors in high-risk industries who need to handle both planned and unplanned work without compromising safety, compliance, or efficiency. BreakIn makes sure every task is documented, assessed, and approved before it begins.

Here's how it supports your operation:

- **Structured task control:** Capture details for both planned and unexpected jobs, ensuring nothing moves forward without a plan and the right approvals.
- **Safety first:** AI-driven hazard identification and built-in access to Standard Operating Procedures help you spot risks and apply the right controls quickly.
- **Complete oversight:** Maintain visibility of tasks, inspections, and approvals across your operation, even in remote or underground settings.

Key features for everyday use

- **Task submission and approval**
  Log new or unplanned jobs with scope, hazards, and control measures. BreakIn routes each job through an approval process so risks are reviewed and addressed before work starts.
- **SOP integration**
  Access a library of relevant Standard Operating Procedures from inside the app. BreakIn suggests procedures automatically based on the job type, reducing errors and missed steps.
- **AI-powered assistance**
  Get tailored guidance on hazards and control measures in real time. Whether you're planning a job or inspecting a site, AI prompts help keep your crew safe and compliant.
- **Hazard and risk management**
  From confined spaces to mobile equipment risks, BreakIn prompts Supervisors to record hazards and controls, creating a systematic record for compliance and prevention.
- **Compliance and accountability**
  Digital records, sign-offs, and an audit-able trail make demonstrating compliance straightforward and transparent.
- **Flexible connectivity**
  BreakIn works online and offline, so you can rely on it anywhere, from an office to an underground face.

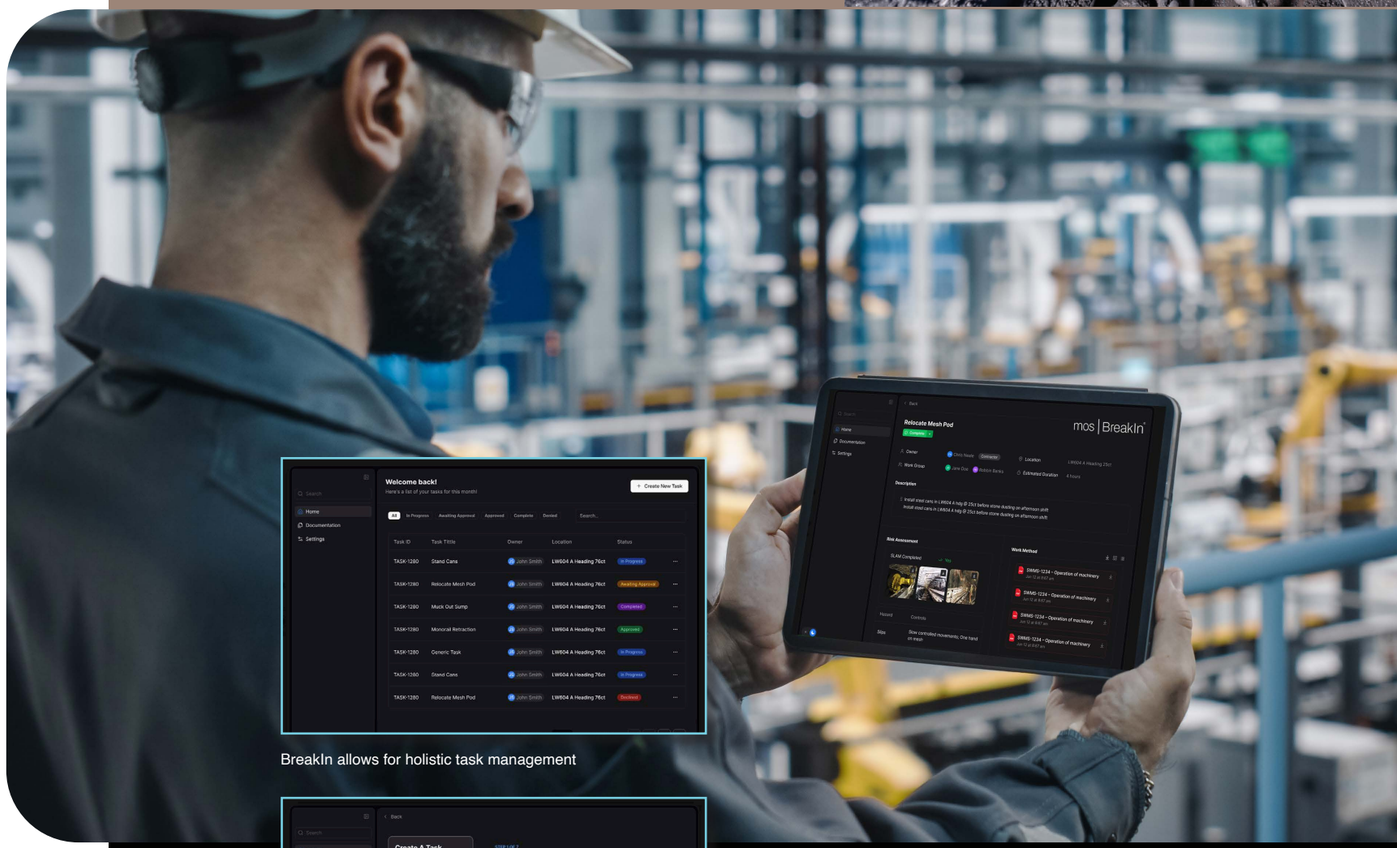
This application is about giving you practical tools to manage work safely and efficiently, not just promises of transformation.

At Mapped Out Solutions, we know unplanned work is unavoidable in high-risk industries. That's why we developed BreakIn, to give Supervisors and their teams a way to plan, approve, and execute every task with safety and compliance built in.

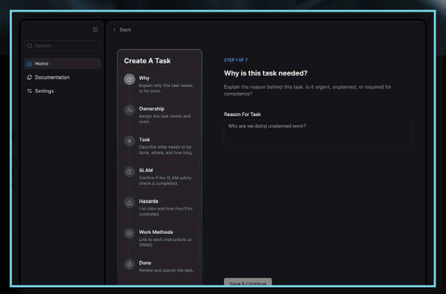
mapped out solutions

Why choose mos | BreakIn®

- **Easy to use:** Intuitive interface for quick adoption.
- **Built for safety:** AI hazard suggestions, SOP integration, and enforced planning keep risk management front and center.
- **Support when you need it:** Training and ongoing assistance from the Mapped Out Solutions team.



BreakIn allows for holistic task management



BreakIn ensures each created task goes through key planning stages prior to approval

With BreakIn, you're equipped to handle the unexpected without losing control of safety or compliance. At Mapped Out Solutions, We will always have a plan and we're here to help you do the same.

BreakIn ensures every job is planned, approved, and documented before it begins. BreakIn alerts you to hazards and required controls for each task.
