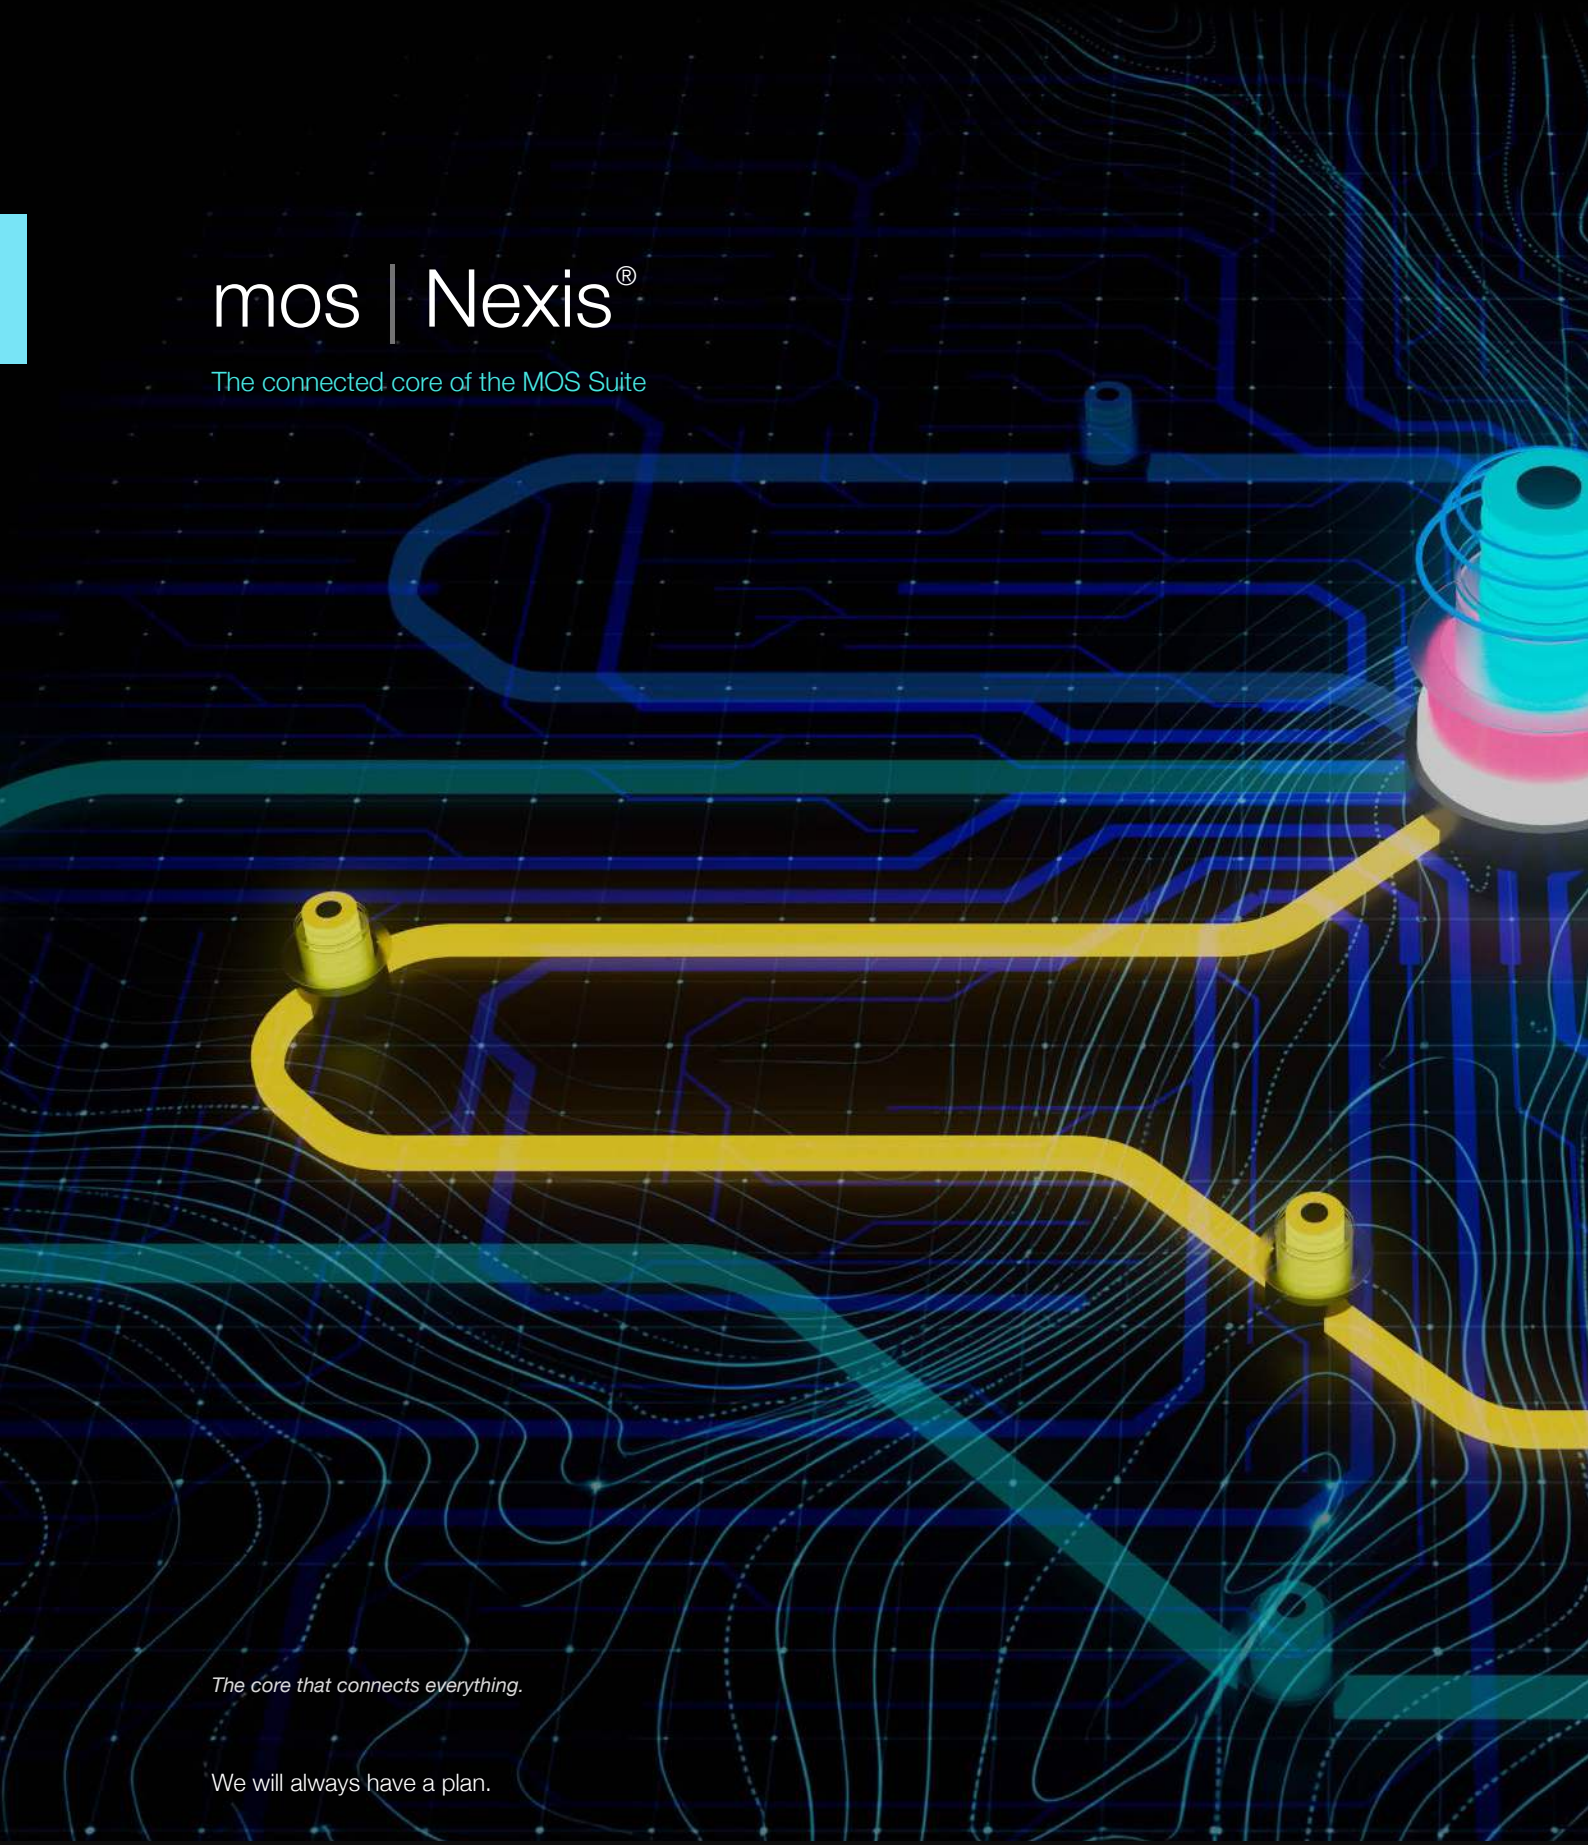
mapped out solutions

mos | Nexis®

The connected core of the MOS Suite



The core that connects everything.

We will always have a plan.

Product status: Production ready, awaiting its first installation

DRAFT | not yet in production, content subject to change

mos | Nexis®

Every mine already runs on an operating system. Most of them just have not written it down. The plan, the production numbers, the actions and the meetings live in different places and tell slightly different stories. mos | Nexis® is the one place a shift works from.

What Nexis® offers

A general manager, supervisor, engineer or HSEQ lead logs in at the start of the shift and sees the plan, the production and the problems together, live and in front of them.

Here's how it supports your operation:

- **One place to work a shift**
  The plan, the production and the problems in one view, rather than three systems that have to be reconciled.
- **The operating system, written down**
  The way the site is actually run, captured so it survives people moving on.
- **Problems while they are still cheap**
  A KPI turning red shows up when it turns, not when the month closes.
- **One version of the number**
  Production, actions and meetings reading from the same source, so the shift stops arguing about whose figure is right.

Key features for everyday use

- **Dashboard**
  The shift at a glance, with the headline measures and what needs attention first.
- **Production window**
  Live production against the plan, so variance is visible inside the shift.
- **Individual action plan**
  Every person's actions in one list, owned and dated rather than scattered.
- **Meetings**
  The meeting cycle held in the system, with the record attached to the work it concerns.
- **Team structure**
  Position descriptions and reporting lines, so accountability is explicit.
- **Delays and RCAs**
  Delays captured and root cause work tracked through to a close out somebody can find later.

The production window, live against plan

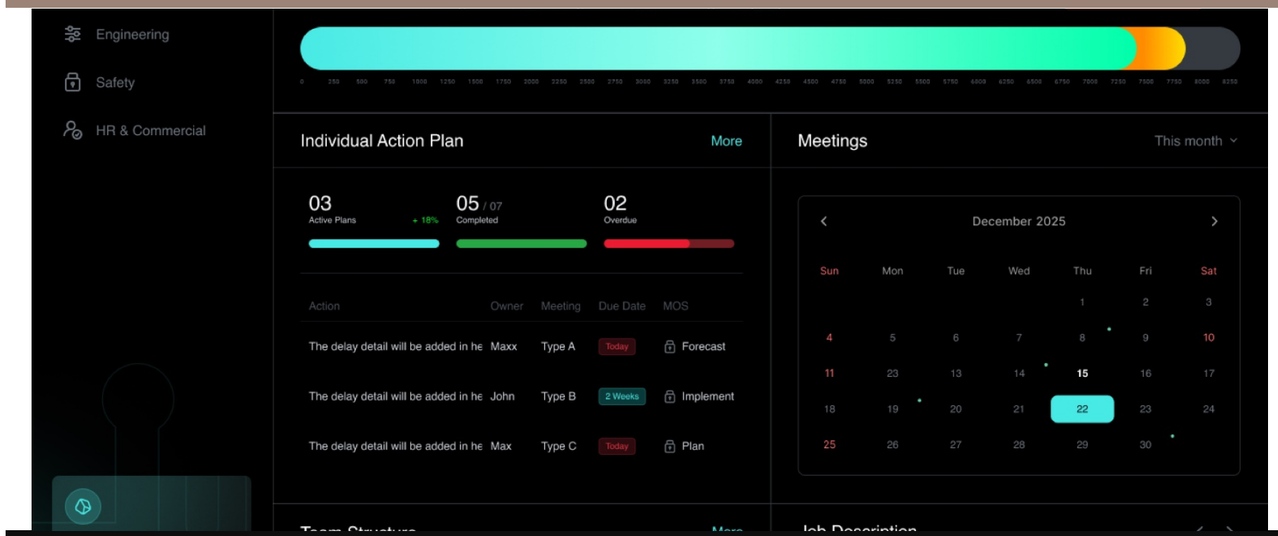
Every mine already runs on an operating system. Nexis is the first one written down.

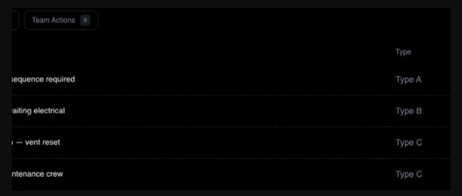
mapped out solutions`

Why choose Nexis®?

Nexis is the connected core of the MOS Suite. Every other app connects to it or through it, so the operation has a spine rather than a collection of tools.

- **The spine and the heart**
  The data collector that reads the site systems, and the place the shift is actually run from.
- **Organised around the five pillars**
  Forecast, plan, schedule, implement and review, the same structure MOS reviews are scored against.
- **Built from real reviews**
  Shaped by what MOS found on site, not from a product roadmap written at a distance.
- **Everything connects to it**
  The production, safety and engineering apps feed it or read from it, so nothing has to be entered twice.
- **Your data, your tenancy**
  Hosted per site, with the operation's own data kept to itself.
- **Support when you need it**
  Mapped Out Solutions provides training and support to help your team adopt it properly.





Delays and actions, owned and tracked

One picture, four lines

Production, safety, engineering and change all read from the same core. The result is one picture of the operation instead of four, and decisions made on today's numbers rather than yesterday's.

Production ready and awaiting its first installation.
