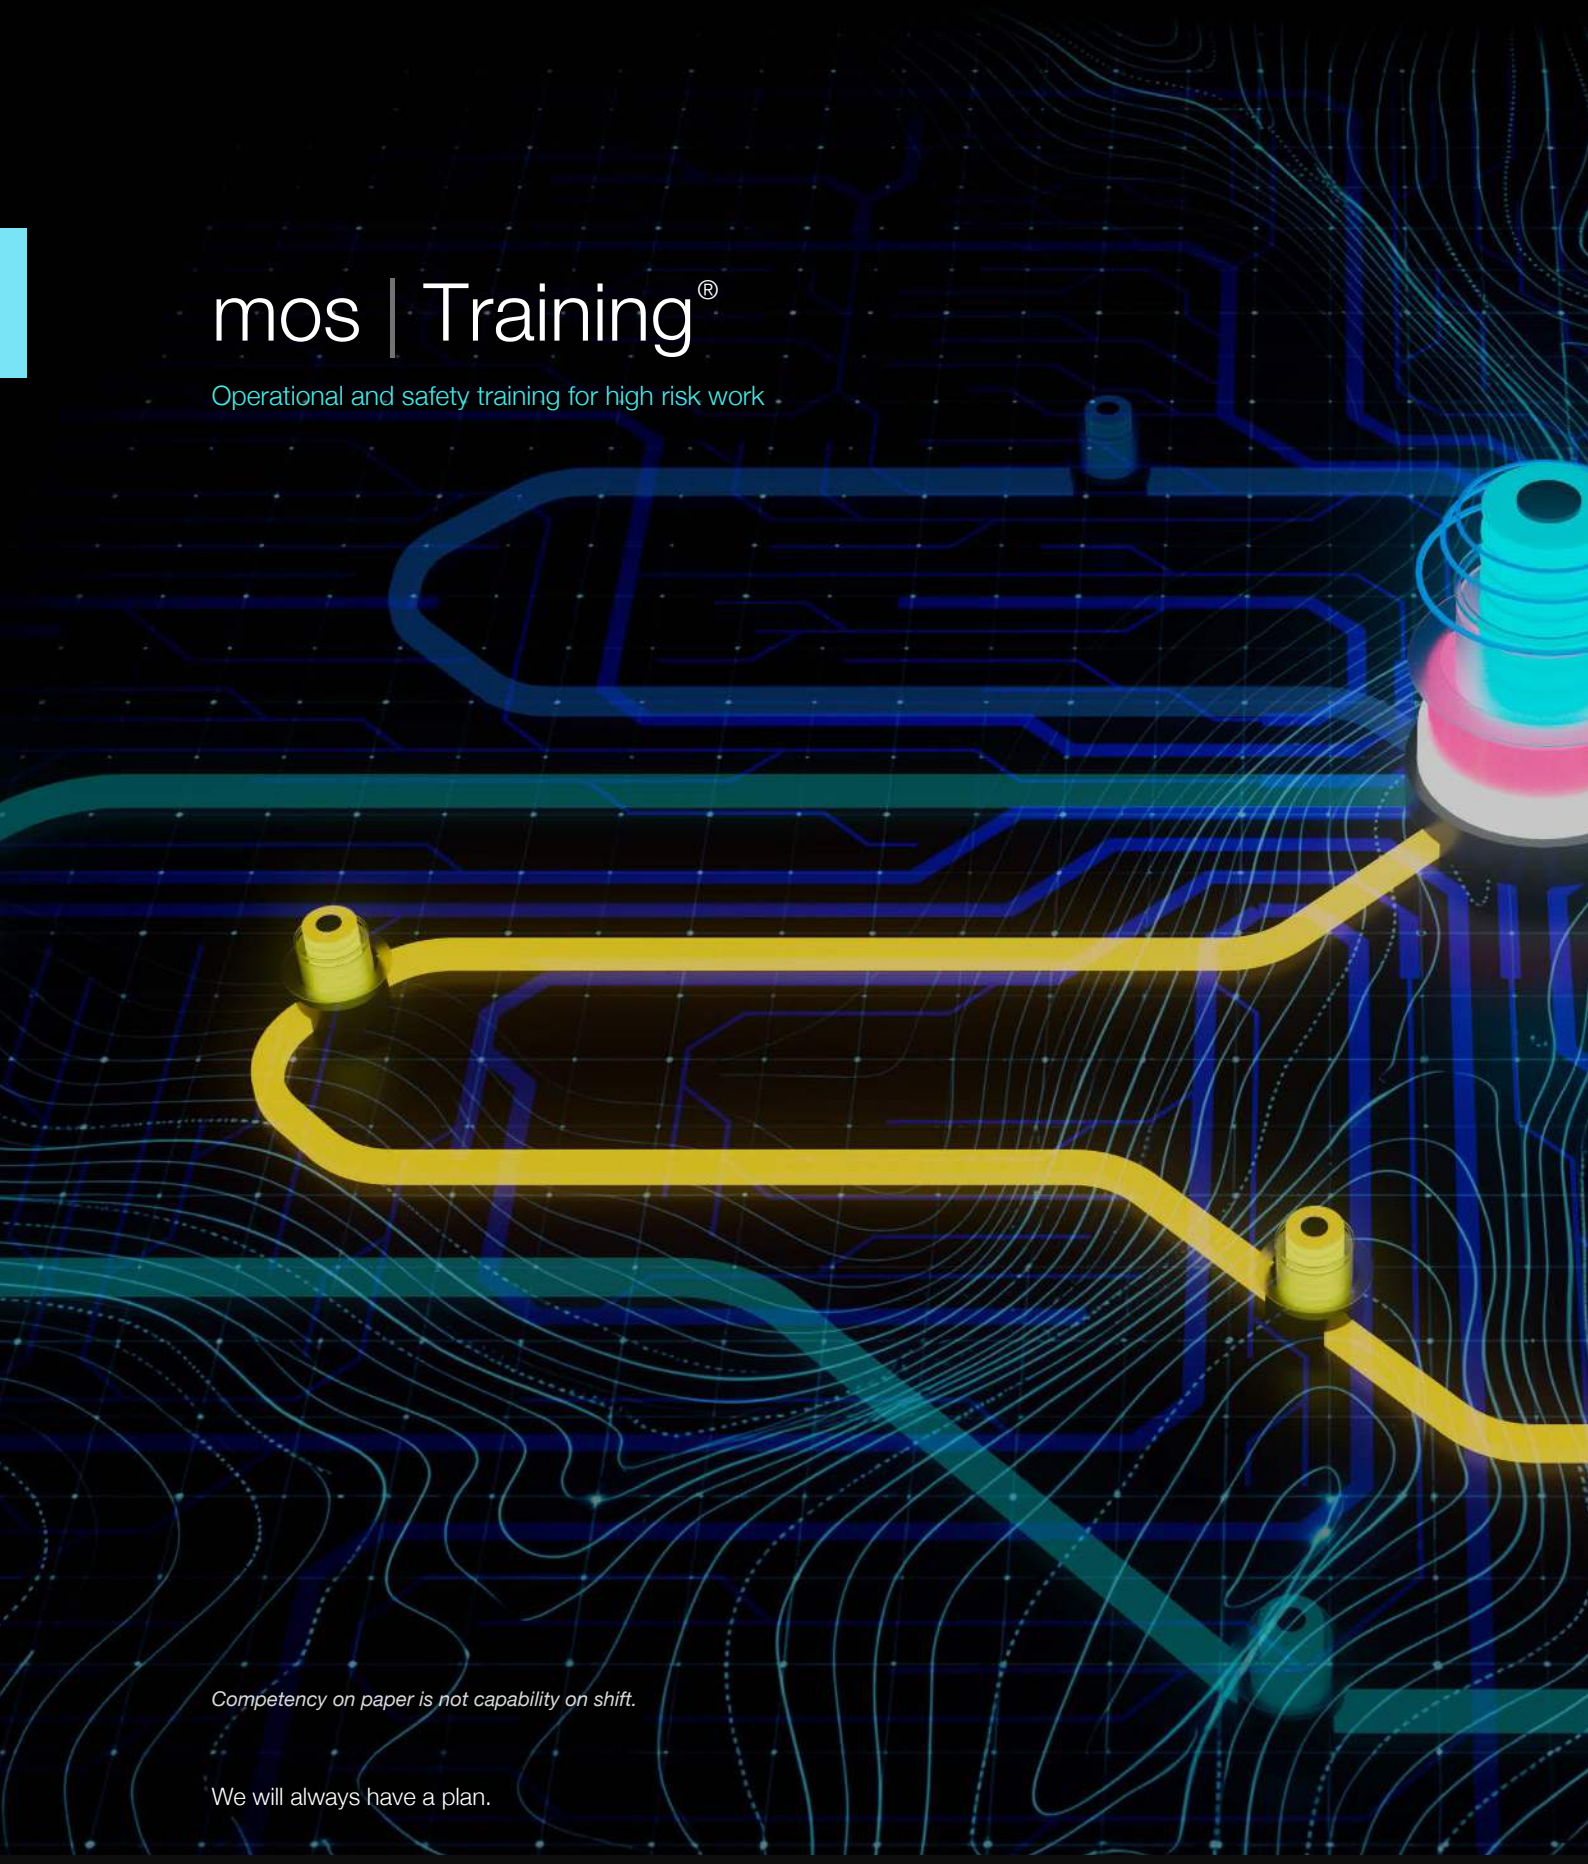
mos | Training®

Operational and safety training for high risk work



Competency on paper is not capability on shift.

We will always have a plan.

Product status: Courses available now, bespoke builds on request

mos | Training®

Generic modules do not reflect your procedures, your equipment or your risks, so people pass the test and still cannot run the work. mos | Training is written by people who have run the work, delivered the way you want to receive it: off the shelf, built from your own procedures, or both.

What Training offers

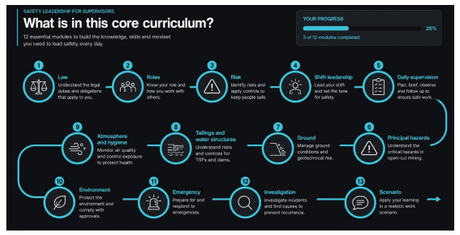
A catalogue you can buy a seat on today, and the option to have your own courses built from your own SOPs and TARPs. Everything is CPD certified, self paced online, with in person delivery available.

Here's how it supports your operation:

- **Three families, ready now**
  The Leaders Series, the Psychosocial Series, and the Queensland coal supervisor programme. Buy a seat and start today.
- **Or built from your procedures**
  Authored from your own SOPs, TARPs and real scenarios, so the training matches the job rather than describing a generic one.
- **Written at supervisor level**
  Too shallow and nobody learns, too technical and it becomes a geotechnical course. These are pitched for the person on shift.
- **Legally grounded, not generic**
  Queensland coal supervision is a statutory role. The courses teach the duties as they actually sit in the legislation.

Key features for everyday use

- **CPD certified**
  Every course carries CPD certification, so the training counts towards recognised professional development.
- **Built to be finished**
  Twelve modules in the core curriculum, each doing a job, with progress tracked so a supervisor knows what is left.
- **Competency mapped**
  Assessment banks reverse mapped to statutory competencies, so what a person is assessed on is what the law asks of them.
- **One production standard**
  Every course looks, sounds and assesses to the same mark, whether it is ours or built from your content.
- **Versioned and maintained**
  Kept current as your procedures and your equipment change, rather than frozen at the version delivered.
- **Reporting that survives an audit**
  Completion, scores and dates, tracked and exportable, in whichever system you run it on.



The twelve module core curriculum, tracked to completion

Competency on paper is not capability on shift.

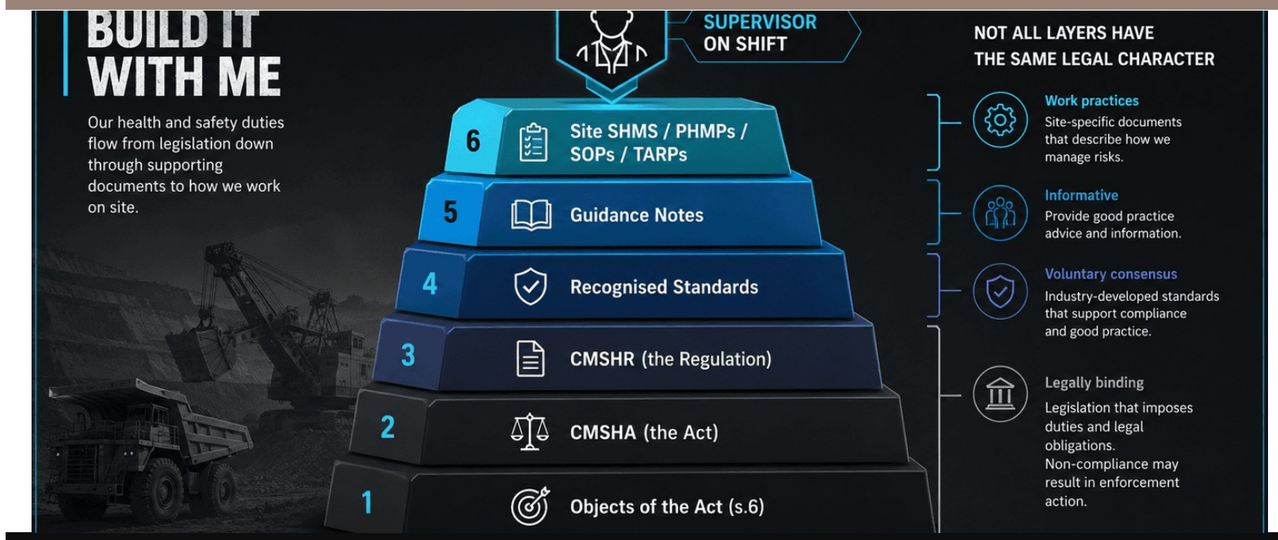
Why choose Training?

Courses are built in mos | Studio, our own authoring tool, and delivered through mos | Learn, our own platform. The storyboard, the build and every later update stay in one place instead of passing through someone else's system.

- **Three ways to receive it**
  Hosted on a portal in your own branding, as a SCORM package for the LMS you already run, or as seats on ours.
- **Written by operators**
  By people who have run the shift, not by instructional designers working from a manual at a distance.
- **Proven on a real site**
  Kestrel asked for a supervisor bundle built around their operation. Seven packages across two learner paths, so nobody sits the same content twice.
- **Nothing entered twice**
  Training connects to the rest of the MOS Suite, so the people, the roles and the records line up with the operation.
- **Your data, your tenancy**
  Hosted per site, with the operation's own records kept to itself.
- **Support when you need it**
  Mapped Out Solutions provides training and support to help your team adopt it properly.



The safety and health management system, taught as it actually works

Start with one course

Take a seat on a course that exists today, or send us one procedure and we will build a pilot from it. Either way you see the standard before you commit the catalogue to it.

Courses are CPD certified. Bespoke builds are quoted on length and complexity.
